Summary

Full Stack Software Engineer with 5 years of experience designing and delivering scalable web applications and SaaS platforms. Strong background in modern JavaScript ecosystems, with hands-on expertise in React, Next.js, Node.js, TypeScript, and cloud-based architectures. Experienced in building end-to-end solutions, from front-end interfaces to robust APIs, applying clean architecture, SOLID principles, and agile practices. Proven ability to translate business requirements into reliable systems, automate workflows, and improve operational efficiency. BSc in Computer Science from UFPB, with experience in mentoring, teaching programming, and contributing to academic and technical initiatives.

Experience

Full Stack Software Engineer

Laks Tecnologia LTDA | Belo Horizonte, Brazil (remote)

04/2024 – 03/2026

I contributed to the evolution of core platform systems by strengthening backend reliability, improving operational workflows, and delivering integrated administrative and communication solutions.

- Improved critical backend workflows by refactoring API route structures, redesigning Prisma entity relationships, and introducing additional validation layers, reducing recurring operational issues tracked via Sentry and increasing system reliability across dependent modules.
- Developed and maintained administrative interfaces using React, including dynamic forms, paginated listings, and reusable UI components, centralizing access to operational data and significantly reducing manual effort for support teams.
- Implemented full integration with the WhatsApp Evolution API by designing secure endpoints for outbound messaging, callback handling, and template management, automating communication flows and improving responsiveness between the platform and end users.
- Collaborated closely with product and operational stakeholders to ensure backend and frontend solutions aligned with business needs and scaled safely as system complexity increased.

Skills: TypeScript, Node.js, React, Prisma, REST APIs, PostgreSQL, WhatsApp APIs, Sentry, Scrum, XP.

Software Analyst

Indra Minsait | João Pessoa, Brazil (Hybrid)

03/2026 – Present

Responsible for the maintenance, enhancement, and development of features for judicial and government systems at the Court of Justice of Paraíba, a Brazilian state court institution. Working with legacy and modern Java applications, Angular frontend development, enterprise integrations, and optimization of internal judicial workflows in large-scale institutional systems.

- Maintained and evolved enterprise Java applications running on legacy architectures, working with technologies such as JSF, PrimeFaces, CDI, Maven, WildFly, and relational databases in critical judicial environments.
- Developed and maintained frontend features with Angular, contributing to internal administrative systems focused on operational efficiency, usability, and maintainability.
- Investigated and resolved complex backend and infrastructure issues involving dependency injection, application server configuration, authentication flows, and production runtime errors in Java enterprise environments.
- Worked on REST API integrations, backend service maintenance, database operations, and internal system interoperability across multiple institutional platforms.
- Applied Agile methodologies (Scrum/Kanban), Git-based collaborative workflows, code review practices, debugging, software refactoring, and quality-oriented development approaches such as TDD in daily activities.
- Collaborated with multidisciplinary teams in the modernization and continuous maintenance of judicial and government systems serving large-scale operational demands.

Skills: Java, Spring Boot, JSF, PrimeFaces, Angular, TypeScript, Maven, WildFly, REST APIs, SQL, PostgreSQL, Oracle Database, Git, Scrum, TDD, Software Maintenance, Enterprise Systems, System Refactoring.

Education

BSc in Computer Science – Federal University of Paraíba, Brazil (2021 - 2025)

Languages

English: Full professional proficiency

Portuguese: Native

Skills

TypeScript | Advanced JavaScript | Programming Logic | Node.js | React | Next.js | Vue.js | Angular | HTML | CSS | REST APIs | Webhooks | WebSockets | Pub/Sub | Prisma ORM | PostgreSQL | MongoDB | SQL | Elastic | Redis | Stripe | Supabase | Clean Architecture | SOLID | Software Architecture | Design Patterns | SaaS Development | Automated Testing | Jest | Front-end Performance Optimization | Accessibility (A11y) | CI/CD | Pipelines | Docker | Git | GitFlow | Jenkins | Feature Flags | Azure | AWS | GCP | SonarQube | Sentry | Copilot | Cursor | Windsurf | Antigravity | Agile Methodologies (Scrum/Kanban) | System Refactoring | DevSecOps | API Integrations | WhatsApp API
